ADRM Releases Major Update to its Healthcare Insurance Data Model Set

Washington, DC, October 11, 2007 – ADRM Software, Ltd. (ADRM), a global leader in large-scale industry-specific information architecture solutions, today announced the release of a major update to its Healthcare Insurance (aka Payer) set of purpose-built data models designed to help accelerate and reduce the risk inherent in the transformation to the robust information foundation required to successfully compete in today's competitive and cost-focused healthcare insurance industry. This new release offers numerous enhancements including extensive support for increased transparency of claims and providers.

“We were hearing from the healthcare insurers that we speak with that for a variety of reasons they want to be able to capture and manage more detail than ever about the patient encounters and resulting services and products being provided by various providers that result in claims”, said Kevin Schofield, ADRM's Vice President of Sales & Marketing. “Our new release delivers increased information richness to support this desire for better transparency of claims and provides what we believe is clearly the most comprehensive and detailed healthcare insurance information architecture solution available today.”

ADRM's Healthcare Insurance data models are available now. Additional information can be found on the web at <http://ww.adrm.com>.
